

# Global Risk Management

**TCS** BANC

Risk management has traditionally been performed by individual business divisions, which vary in their capabilities to identify and manage risks, and collaborate information across a bank. This often results in fragmented and prolonged business processes, reduced agility to respond to risk events, a restrained ability to scale up business volumes, and added infrastructure and operational costs. Progressive risk management demands a unified picture of risk across a bank, while it continually strives to achieve accurate, integrated strategies, complete transparency and prudent decision making, thereby reducing overall costs.

Understanding this need, Tata Consultancy Services (TCS) offers global risk management solution from TCS BaNCS that serves as a critical link between risk strategy and day-to-day business operations. It enables banks to propagate opportunistic, risk directives across all business lines and geographies using risk appetite indicators and risk-based limit profiles. Leveraging global risk management solution from TCS BaNCS, risk managers can continuously monitor exposure and limit profile/concentrations, asset quality, risk-reward parameters, vulnerabilities and in-place countermeasures such that risks are constantly optimized and in line with risk strategy. A comprehensive yet flexible global risk management solution from TCS BaNCS can provide a real-time, fully drillable and aggregated view of quality-assured, fully-audited, transparent global credit risk reference data across business divisions and asset classes. The solution also enables risk managers to access the bank's consolidated data along with trade-level data and caution traders on unsafe trade deals.

## Overview

The current financial turmoil has asserted that measuring risk is not the same as managing risk. Risk managers frequently produce too much data and there is also a lack of quality and transparency. Further, driven by regulatory agenda, risk managers have become isolated not just from decision making but also from the very risks that they are mandated to manage. No wonder, 80 percent of financial services firms say their governance, risk and compliance processes are still not integrated across their enterprise.

One of the crucial questions banks need to ask themselves is about aggregated data and full, transparent access for risk managers to trade data. There is an increased need for an integrated risk management approach, which can help banks continuously identify risks, assess the institution-wide impact and implement an enterprise-wide strategy to manage those risks collectively.

### **Comprehensive, enterprise-wide credit risk management**

The global risk management solution from TCS BaNCS is a robust risk infrastructure management platform that can help banks address all the above challenges

and also prepare for the ever-growing market changes and new regulatory requirements. It also focuses on a portfolio driven and deal-driven risk management approach and provides real-time, fully-drillable aggregated portfolio risk data views on country, industry, business division and counterparty levels. Whether it is maintaining relationships between counterparty structures such as joint ventures and common directors or analyzing the impact of securities or collateral, TCS BaNCS can provide banks with a competitive edge for sustainable growth. From historical trend analysis and benchmarking capabilities, to identifying potential problems and integrated limit sanctioning processes, the solution caters to every need, thereby, strengthening a bank's overall risk institutional culture and helping banks with better decision making.

Our solution also provides a 360° view of quality-assured, fully-audited, transparent and verifiable global credit risk reference data across business divisions and asset classes. The global risk management solution from TCS BaNCS is flexible, in that it seamlessly connects with analytical engines and rating models, and rapidly adapts to enhancements in bank-specific risk policies or regulatory requirements.

### Reference Data Maintenance

- Proven data model
- Streamlined data collation process to ensure data quality
- Consolidated and controlled maintenance of risk reference data
- Audit trails/reports
- Complete coverage of all asset classes

### Real-time Aggregated Risk Exposure

- Fully drillable aggregated portfolio exposure views
- Business rules/netting rules
- Portfolio level limits and exposures
- Risk mitigants (collateral assets, guarantees)

### Continuous Risk Monitoring

- Credit appraisal and integrated credit approval process
- Integrated spreading and probability of default rating calculators
- Detection & classification of excesses
- Causal analysis
- Breach analysis and its follow-up till logical closure

### Management Reporting

- Management dashboard
- Oversight for the Board/Senior management for governance
- Real-time availability of decision support information
- Slice & dice information and ad-hoc reporting
- Real-time market data

*The global risk management solution from TCS BaNCS gives your firm the agility to manage global risk events swiftly by using information-driven, decision-making tools, fostering prudent risk management practices.*

## An overview of our global risk management solution

### Benefits

Developed on a service-oriented, scalable, high-performance platform for global 24x7 use, global risk management solution from TCS BaNCS easily integrates with heterogeneous trading/booking systems and various data hubs. Further, it helps banks with the following:

- **Single source of risk information.** By establishing cross-referencing between counterparty source systems, accounts and trading engines, our solution prevents over estimation of RWA (Risk Weighted Assets) and provisions, and facilitates large exposure and concentration reporting
- **Risk process governance.** By increasing coordination between various risk management functions, our solution helps banks to implement credit policy
- **Unified, yet agile platform.** A comprehensive yet flexible global risk management solution from TCS BaNCS can be customized and integrated with institution-specific rating models, analytical engines, and decision engines
- **Reduced Total Cost of Ownership (TCO).** By integrating disparate applications across client on-boarding, facility agreement, collateral management, limit management and sanctioning, exposure management and reporting into a single solution, it enhances user experience and reduces TCO
- **Accelerated delivery.** Leveraging TCS BaNCS accelerators such as development tools for auto-code generation, and Service Integrator for easy, scalable, technology-agnostic, and resilient integration with the bank's IT infrastructure, it ensures quicker time-to-market and minimizes project risks.

### Features

The global risk management solution from TCS BaNCS reclaims enormous time lost in gathering data manually from disparate applications for effective credit risk analysis and control. By embedding data governance standards and risk management practises into business processes, it builds a single source of risk-related reference data and improves risk management capabilities of the bank. It further helps banks with functionalities such as:

- **Risk management dashboards.** The global risk management solution from TCS BaNCS provides real-time, institution-wide, consolidated risk data visibility and multiple portfolio views across business lines and asset classes
- **Financial spreading, credit analysis and sanctioning process.** Spanning across counterparty, facility agreements, multi-faceted limits, credit analysis and sanctioning capabilities, it provides delegated lending authorities implementation
- **Collateral management.** The solution allows for maintenance and ranking of collateral -- both assets and guarantors — at counterparty, facility agreement, and trade levels
- **Excess management.** The solution enables the banks to identify excesses automatically and classify them into active, passive, material and immaterial breaches. Its comprehensive workflow mechanism tracks assigned tickets to credit officers and tracks them until closure
- **User configurable alerts, warning notification, and widgets.** Provides configured widgets for alerts based on external market or internal events, tracking pending actions and hotlinks, with the ability to email and view these notifications

## How we help our customers

TCS BaNCS partnered with a leading, global European investment bank to deploy our web-based Global Risk Management solution in order to build a single source of counterparty limits and exposures. Leveraging fine-grained security access controls, the application enabled the bank to perform the entire credit analysis and sanctioning process from client on-boarding, facility and limits setup, rating scorings to credit analysis, sanctioning and excess monitoring. In the process of implementing on its strategic vision, multiple tactical systems were retired, thereby, eliminating data redundancy issues. The global risk management solution from TCS BaNCS also helped the bank in off-shoring parts of the credit management process through its granular security and data access controls.

The bank benefited from improved process efficiencies by implementing standard credit risk policies across multiple business divisions and products around the globe, and reduced total cost of ownership by consolidating and retiring overlapping applications into an integrated solution.

## Why TCS BaNCS

The TCS BaNCS product suite for banking, capital markets and insurance enables business transformation in financial services. Increasing operational efficiency and helping financial institutions stay agile, our solutions deliver a competitive edge with unmatched certainty. We aspire to be better than established benchmarks, which is why we have embedded an Alpha ("α"), representing superior returns delivered to our customers, consciously and prominently within our brand. The plug and play, component-based product suite consistently turns in impressive benchmark results, with a fine-tuned, highly scalable technology architecture that supports financial institutions with the highest capacities for transaction volumes, peak transactions per second, and transaction history size. With such a track record, it is only natural that the TCS BaNCS product suite can help financial institutions of any size gain a distinct, competitive edge.
