

西安杨森制药有限公司
Xian-Janssen Pharmaceutical Ltd.

On behalf of Xian Janssen Pharmaceuticals, I offer my thanks and gratitude for the contributions of TATA Consultancy Services in successfully implementing Material Flow Control System MES project at XJP, Xian, China.

The launch of this system not only solved the risk of business continuity in Xian plant which used outdated and out of support system, but also improved the material flow control process by implementing the PPC space management, pull and incoming material online check.

This system will be the foundation stone for Xian plant on the way to manufacture intelligently, allowing process optimization in the Xian internationalization phase.

With TCS's business experience in development and implementation of customized MES solutions, along with the strong regional presence in China, and XJP leading position in Pharmaceuticals, we are extremely happy in partnering with TCS. This has been a strategic implementation for XJP and would act as a model for similar implementations in future.

We have experienced the TCS Experience Certainty and "Global Network Delivery" throughout the project and are confident on our continuing relationship in future.

Best regards,

Zhang Yuping
