Quartz for KYC

Challenge

KYC regulations are increasingly becoming critical issues for organizations globally and it is estimated that millions are spent each year on KYC related procedures alone. Existing KYC processes are lengthy and complex, affording little transparency on how data is collected. Further, the secure authentication of customer identification data and the need to protect it from unauthorized and fraudulent usage add to the challenges faced by firms worldwide. What institutions are looking for is a single and integrated solution catering to multiple regulatory requirements and stakeholder needs.

A decentralized solution for KYC can collect data from multiple sources and maintain it in a single, immutable, secure, data store. Authentication becomes faster, easier, safer and more efficient by leveraging distributed ledger technology (DLT) and ensures instantaneous access to authentic KYC information. The KYC solution from Quartz is a pan-enterprise e-KYC platform that offers organizations a comprehensive view of all client relationships spanning multiple business lines, enabling intelligent and informed decision-making.

Solution

TCS has invested in future proofing our KYC solution through integration with blockchain technology and enabling organizations to leverage the power of ecosystems. This strategy is designed to bring inefficiencies for the organizations and enhance the end customer experience significantly. The Quartz for KYC solution utilizes a private permissioned blockchain to record and provide KYC compliance information to authorized entities based on customer consent. The solution is designed to simplify the end-to-end KYC process, standardize and streamline data collection for efficient and rapid customer onboarding, periodic reviews, remediation and lifecycle management. It caters to the KYC requirements of institutions across multiple industries and is designed as a combination of off-chain and blockchain-based (on-chain) services.

Key features:

- **Blockchain leverage** – Quartz for KYC leverages a unique on-chain and off-chain service delivery model so that the right parts of the KYC business process, including processes related to KYC approval by linked registries or authorities, sharing of valid KYC information to authorized ecosystem participants etc. are maintained on blockchain while other processes including the acquisition of customer information, due diligence, screening, etc. are managed in an off-chain model. Such an approach ensures that organizations are able to access accurate, tamper-proof KYC information on an instantaneous basis, even while ensuring data privacy and sharing of information based on customer consent.
- **KYC** – Assesses the risk associated with a customer by considering multiple attributes, which may differ based on the customer type. The workflow feature of KYC module enables financial institutions (FI) to perform, enhanced Due Diligence, and continuous monitoring of customers (perpetual KYC).
- **Risk Assessment** – In-depth analysis and actionable advice such as trigger based reviews on virtually all aspects of risk cutting across credit risk, operational risk, market risk, governance risk and compliance (GRC).
- **Sanctions screening and watchlist scanning** – List agnostic support for local and global watch lists with advanced scanning algorithms.
- **Case Management and workflows** – Easy configurability to drive processing, using a rule engine and automated workflows to manage a case throughout its life cycle.
- **Dashboards** – Holistic view of various statistical data captured and analyzed by the solution.
- **Single interface connecting both internal and external data sources** – AI, cognitive chatbots to support queries, policies, procedures and hard-to-spot early warning signals across the risk and compliance value chain.
- **Reporting and Audits** – Audit log maintained on blockchain for all actions performed by users. It offers both standard MIS and ad hoc reports for compliance to support local and global regulatory requirements.

End-to-end KYC with latest technological interventions

Benefits

- Instant access to trusted KYC information, elimination of duplicate records, immutability of records using blockchain technology
- A common platform for multiple business lines or multiple institutions, allowing for the creation, modification and sharing of KYC data
- Flexibility to configure KYC rules and parameters as per business needs
- Compliant with global regulations and data privacy norms
- Digital data analysis supported by unsupervised models and NLP, connecting internal and external data sources
- Real-time simulation and easy integration with any BPM tool
- Reverse link analysis with advanced analytics and support for continuous risk assessment for real-time views of the client profile

Quartz Advantage

Quartz solutions are targeted at helping organizations across industries to leverage blockchain meaningfully for their businesses. The advantages of Quartz are deeply rooted in the following principles:

Co-existence, Integration and Interoperability: Built on the principles of Co-existence, Integration and Interoperability, Quartz solutions are simple, lightweight and can seamlessly bring together third-party solutions, legacy applications and messaging middleware. They can therefore reduce entry barriers to blockchain adoption by insulating connecting systems from the complexities of the underlying blockchain.

Agile Development and Deployment Framework: Quartz DevKit along with its foundational components can provide an agile framework for faster development and deployment of business applications on a choice of blockchain platforms.

About Quartz

Quartz offers innovation-led solutions that combine the benefits of DLT and AI. Built on the premise of 'trusted intelligence', the solution addresses business challenges across the entire value chain including development, integration, and governance of ecosystems for various industries including Financial Services, Banking, Supply Chain, Energy & Utilities and eGovernance. Backed by awards from Financial Technology Forum (Best Fraud Prevention Solution), Asia Pacific Stevie Awards (Best Machine First Sanctions Screening), Juniper Research (Gold Winner for Digital Identity Innovation), the Asian Banker (Best Fraud Prevention Technology Implementation), Financial Technology Forum (Best New Post Trade Solution of the Year), Asset Servicing Times (Outstanding Innovation Award) and recognition from Analysts (ranked #1 Best Performing Fraud Management Solution by IBS Intelligence) Quartz can help organizations operate at the forefront of technology innovation.

About Tata Consultancy Services Ltd (TCS)

Tata Consultancy Services (TCS) (BSE: 532540, NSE: TCS) is a digital transformation and technology partner of choice for industry-leading organizations worldwide. Since its inception in 1968, TCS has upheld the highest standards of innovation, engineering excellence and customer service.

Rooted in the heritage of the Tata Group, TCS is focused on creating long term value for its clients, its investors, its employees, and the community at large. With a highly skilled workforce of over 607,000 consultants in 55 countries and 180 service delivery centres across the world, the company has been recognized as a top employer in six continents. With the ability to rapidly apply and scale new technologies, the company has built long term partnerships with its clients – helping them emerge as perpetually adaptive enterprises. Many of these relationships have endured into decades and navigated every technology cycle, from mainframes in the 1970s to Artificial Intelligence today.

TCS sponsors 15 of the world's most prestigious marathons and endurance events, including TCS New York City Marathon, TCS London Marathon and TCS Sydney Marathon with a focus on promoting health, sustainability, and community empowerment. TCS generated consolidated revenues of US \$29 billion in the fiscal year ended March 31, 2024. For more information, visit www.tcs.com
